

90% of Students have Covid 19

Studies show that *90% of students in the area* have Covid 19. We are all wondering the same question: *How?* How is it that all of these students have Covid 19? The doctors has some of the answers.

The reason a lot of these students have Covid is that their *teachers* aren't doing the proper procedure to prevent this. *Had* they done this then they would not have this issue.

Students have complained that the teachers are not even trying to do this. If this is true, then it is very likely that all the school's in the area could be shut down. If this happens, then a lot of people could lose their jobs, the students would not get their education. A couple of students also have something to say about this as well.

The teachers say that they are trying to make sure that they are doing all of the procedures correctly, but every time classes are dismissed, they never wipe down the desks. They say that we need to keep our distance in the hallways, but they are always crowded, and they never dismiss their classes separately.

Well, the students say that they are not trying, the doctors are also saying that they *may not* be trying, so now let's hear what the teachers are saying.

We *are* trying, despite what others say. As for wiping down the tables, desks, boards, and everything, we are using an 80% alcoholic spray that gets rid of the germs. We do it while the students aren't around so that they don't put germs *back on the stuff* that we have already sprayed until the next class comes and goes. As for dismissing, it *is* a little crowded, but not to the point where they can't keep some type of distance from the other classes. I admit that we all let our classes out at the same time, but that doesn't mean anything, does it?

So how do you explain all the students getting covid, and what do you think will happen to the schools? Will you go virtual or will you continue going to school face to face?

The students getting covid is easy. That answer is that *they are not wearing any type of masks*. Now some of them are wearing masks, and we always encourage this, but most of the students think that they may not need them. The 90% of students getting Covid are ones that are not wearing masks. The last 10% are wearing masks. As for going to school, We encourage students to come face to face, but they need to wear masks. Most come to school without masks, which is fine, but also a lot of them are going virtual. We believe that the students learn better face to face, but we do not force this.

So what you are saying is that you are trying your very best to keep Covid out, but some of the students you teach are not trying?

Yes, that would be the case.

There you have it folks. Teachers say that they are trying, but their students say that they are not, and the doctors are not sure. Personally, I believe that the teachers *are* trying, but I also believe that the students are as well. We'll continue with the School Board next time. Until then, watch for other news. This is your reporter from Fire Channel 6, Jesse Caldwell. Back to you, Jeff.
